FROM THE FLOOR UP · FIELD SHEET

The AI-Ready *Folder* Map

AI remembers what you file. Set these 6 up once, drop everything into its right home, and every note, agreement, and brain dump becomes memory your AI can use.

01

`instructions.md`

The instructions file

One page at the root that AI reads first, every session. Your voice rules, where files get saved, and what it must never assume or invent. Write it once, tighten it every time the AI misses.

02

`about/`

The about folder

Who you are, how you work, what you sell, and how you sound. A file for you, a file for the business, a file for voice. This folder is what keeps every output sounding like you.

03

`operations/`

The operations folder

Your working memory. A queue of every open task with deadlines, a log of what shipped, and an inbox where notes, brainstorms, and brain dumps get dropped the moment they happen. Jot it, drop it, and AI files it and brings it back when it matters.

04

`outputs/`

The outputs folder

Where everything AI builds for your own business lands: marketing plans, social posts, lead magnets, one subfolder per project. Builds never sit loose at the root.

05

`clients/[client-name]/`

One folder per client, 3 inside

Every client gets the same skeleton, so nothing ever gets lost between engagements.

> **about/** who they are, their goals, and how they talk
>
> **materials/** everything they give you: intake answers, call transcripts, signed agreements
>
> **outputs/** everything AI builds for them: proposals, recaps, deliverables

06

`templates/`

The templates folder

Service agreements, proposals, recap formats, anything you send more than twice. Build each one with AI a single time, then reuse it for every client after that. Keep one prebuilt client folder here too, the whole skeleton with blank about files, and duplicate it every time a new client signs.

The rule that holds it all together: inputs go in materials, builds go in outputs, and nothing lives loose at the root. A file in its right home becomes memory your AI can find and use.
